

# Personal reflection week: 8

Simon Johnsson

May 2022

# **1 What do I want to learn or understand better?**

**A:**

This week I feel like I have been dabbling more into the layout and styling part of front end. We use tailwind to make CSS easier, which is something that I would like to understand better.

**B:**

I would like to feel comfortable in creating my own web pages without having to rely on already existing layouts.

**A  $\rightarrow$  B:**

Make new pages and read the documentation behind tailwind.

## **2 How can I help someone else, or the entire team, to learn something new?**

**A:**

I think that I should collaborate with someone on a user story so that situations occur where I might know something the other person does not. This leads to naturally helping someone else learn something new.

**B:**

Helping someone or the entire team should come as part of the process. When someone is in a situation where they feel uncertain of how to proceed, the team should be there to provide assistance with their own knowledge.

**A  $\rightarrow$  B:**

Make myself available when others need assistance.

### **3 What is my contribution towards the team's use of Scrum?**

**A:**

I try to share my current progress during the sprint and follow our currently agreed upon process.

**B:**

My contribution should come as part of our process and I should follow and evaluate that process.

**A → B:**

Learn more about scrum, how it's correctly used and how it might benefit our team.

## 4 What is my contribution towards the team's deliveries?

**A:**

I have finished my assigned user stories. Although some stories were a bit unclear of what exactly they were specifying, I followed the description as best I could. This week was shorter than expected which led to me feeling like I haven't contributed a lot.

**B:**

I should feel like my contributions are substantial and meaningful.

**A  $\rightarrow$  B:**

Practice evaluating user story velocity and the team's velocity.
